Hepatitis C Clinical Outcomes

Measure	Explanation	Calculation	Result
Intention to Treat % achieving SVR	<p>% of patients within pharmacy clinic achieving Sustained Virologic Response (SVR) 12 weeks after completion of therapy.</p> <p>Denominator to include <u>ALL</u> patients who started therapy <u>AND</u> are due for or have completed their SVR measurement (i.e. include patients who are lost to follow-up but would otherwise be due for SVR measurement based on the initial intended treatment duration and the 12 week wait-period following the prescribed treatment completion). <u>EXCLUDE</u> patients from the denominator who are not yet due for their SVR measurement based on the selection of their initial treatment duration (i.e. exclude patients who are not 24 weeks post-initial dose for a prescribed 12 week regimen).</p>	<p>Numerator:</p> <p>Denominator:</p>	
% achieving SVR (only include patients who completed the recommended treatment)	% of patients within pharmacy clinic achieving Sustained Virologic Response (SVR) 12 weeks after completion of therapy	<p>Numerator:</p> <p>Denominator:</p>	
% complete treatment	% of patients completing recommended treatment duration (Total number of patients – those that did not finish therapy, i.e adverse reactions, lost to follow-up etc. NOT THOSE WAITING TO FINISH THERAPY)	<p>Numerator:</p> <p>Denominator:</p>	
% medication adherence	% of patients reporting >90% adherence to medication regimen	<p>Numerator:</p> <p>Denominator:</p>	

Data collection:

Outcomes to be reported will be collected over 12 months and will include: clinic numbers, SVR, treatment completion, and medication adherence. **Reporting FY = Patients that completed therapy and SVR follow-up. (If a pt. starts FY17 and finishes FY 18 report with FY 18)**

Data should be collected from patients within the reporting period. Current data for the pharmacy run clinic can be gathered using programs within RPMS: QMAN, FILEMAN or the program iCare. Many pharmacy clinic providers create a panel of their patients in iCare or Excel to track data. If the pharmacists have not been given access to these programs or are not using these programs at their site, we recommend they work with their clinic CAC or QI department to gather the data. These departments can often create a report for you that will pull in the data you require.
